International Water Services Flushability Group (IWSFG), Working to Prevent the Damage Caused by Wipes

About the IWSFG

The International Water Services Flushability Group (IWSFG) is a group of dedicated water professionals seeking to provide clear guidance on what should and shouldn’t be flushed down the toilet to protect customers, wastewater systems, utility workers, and the environment.

Countries Represented

- Australia
- Japan
- Spain
- United States of America
- New Zealand
- Canada
- Turkey

IWSFG Publicly Available Specification (PAS)

Water service providers around the world have experienced expensive problems due to inappropriate flushing of consumer products. These problems include **clogged pumps**, **blocked screens**, **buildups in wastewater treatment plants**, **sewer blockages**, **an inability to effectively treat** the products prior to their release to the environment and **sewer overflows** that can impact public health and the environment. In addition, utility workers are placed at undue physical and health risk when they remove these products from mechanical equipment and raw sewage.

In September 2016, international water groups came together to develop a Publicly Available Specification (PAS) on Flushability. These criteria seek to address the key aspects of the *International Water Industry Statement on Flushability* that was released on September 22, 2016 and signed by over 250 water organizations worldwide, that to be flushable a product must:

1. break into small pieces quickly;
2. not be buoyant;
3. not contain plastic or regenerated cellulose but only contain materials which will readily degrade in a range of natural environments.

To ensure that the PAS was both realistic and accepted worldwide, the specifications underwent **two rounds of public comment**. All comments received were addressed and made public, through the IWSFG website. Critical comments were received by both water and wipe manufacturing organizations. A timeline of the PAS development process is provided:

For more information about the IWSFG and to view the newly released PAS, visit our website at: [http://IWSFG.org](http://IWSFG.org) or contact us via email at staff@IWSFG.org
Flushability PAS Criteria

The PAS is includes three sections:

- IWSFG PAS 1 – Criteria for Recognition as a Flushable Product
- IWSFG PAS 2 – Terms and Definitions for Determination of Flushability
- IWSFG PAS 3 – Disintegration Test Methods – Slosh Box

For a product to be deemed suitable for flushing down the toilet, it must meet **five criteria**:

<table>
<thead>
<tr>
<th>Criteria</th>
<th>Reference Document (with relevant acceptance criteria)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Environmental protection</td>
<td>TAPPI/ANSI Test Method T 401, Fiber Analysis of Paper and Paperboard.</td>
</tr>
<tr>
<td>Toilet and drain line clearance</td>
<td>As outlined in INDA/EDANA 2013, FG501: Toilet and Drainline Clearance Test with a modification to the acceptance criteria as noted in Section 7.2. No plunger shall be required to address blockages.</td>
</tr>
<tr>
<td>Disintegration</td>
<td>IWSFG 2018: PAS 3 Disintegration Test Methods – Slosh Box.</td>
</tr>
<tr>
<td>Settling</td>
<td>As outlined in INDA/EDANA 2013, FG 504: Settling Test.</td>
</tr>
</tbody>
</table>
